Neural ENIGMA

Karel Chvalovský Jan Jakubův <u>Martin Suda</u> Josef Urban

Czech Technical University in Prague, Czech Republic

AITP'19, Obergurgl, April 2019

< □ > < □ > < □ > < Ξ > < Ξ > Ξ > ⑦ Q @ 1/16

ENIGMA:

• guiding clause selection in a first-order saturation-based ATP (E-prover)

<ロ > < 回 > < 目 > < 目 > < 目 > 目 の へ つ 1/16

Why to use neural networks?

ENIGMA:

• guiding clause selection in a first-order saturation-based ATP (E-prover)

<ロ > < 回 > < 目 > < 目 > < 目 > 目 の へ つ 1/16

Why to use neural networks?

• It's cool and we don't want to be left behind!

ENIGMA:

• guiding clause selection in a first-order saturation-based ATP (E-prover)

< □ > < @ > < E > < E > E の Q · 1/16

Why to use neural networks?

- It's cool and we don't want to be left behind!
- implicit automatic feature extraction

ENIGMA:

 guiding clause selection in a first-order saturation-based ATP (E-prover)

Why to use neural networks?

- It's cool and we don't want to be left behind!
- implicit automatic feature extraction

Why maybe not to use them?

- Training tends to be more expensive
- Evaluation is slow-ish for the task [Loos et al., 2017]

< □ > < □ > < □ > < Ξ > < Ξ > Ξ の Q · 1/16

6 Conclusion

Recursive Neural Networks and Embeddings

Idea of embeddings:

- map logical objects (terms, literals, clauses) into R^n
- hope they capture semantics rather than just syntax!

<□ > < □ > < □ > < Ξ > < Ξ > Ξ の Q · 4/16

Recursive Neural Networks and Embeddings

Idea of embeddings:

- map logical objects (terms, literals, clauses) into Rⁿ
- hope they capture semantics rather than just syntax!

Recursive Neural Networks [Goller and Kuchler, 1996]

- recursively follow the inductive definition of logical objects
- share sub-network blocks among occurrences of the same entity

<ロト < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

- single block for every skolem symbol of a specific arity
- separate block for every function and predicate
- block for negation and equality

All under the aligned-signature assumption!

- abstracting all first-order variables by a single embedding
- single block for every skolem symbol of a specific arity
- separate block for every function and predicate
- block for negation and equality
- "or"-ing LSTM to embed a clause
- "and"-ing LSTM to embed the negated conjecture

<ロ> < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

All under the aligned-signature assumption!

- abstracting all first-order variables by a single embedding
- single block for every skolem symbol of a specific arity
- separate block for every function and predicate
- block for negation and equality
- "or"-ing LSTM to embed a clause
- "and"-ing LSTM to embed the negated conjecture
- final FF block taking the clause embedding v_C ∈ Rⁿ and the negated conjecture embedding v_{Thm} ∈ R^m and producing a probability estimate of usefulness:

 $p(C \text{ useful for proving Thm}) = \sigma(final(v_C, v_{Thm}))$

where σ is the sigmoid function, "squashing" ${\bf R}$ nicely into [0,1]

Current neural model parameters:

- *n* = 64
- function and predicate symbols are represented by a linear layer and ReLU6: (min(max(0, x), 6))
- conjecture embedding has size m = 16
- the final layer is a sequence of linear, ReLU, linear, ReLU, and linear layers $(\mathbb{R}^{n+m} \to \mathbb{R}^{\frac{n}{2}} \to \mathbb{R}^2)$
- rare symbols are grouped together we can loosely speaking obtain a general constant, binary function, ...

<ロト < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

Current neural model parameters:

- *n* = 64
- function and predicate symbols are represented by a linear layer and ReLU6: (min(max(0, x), 6))
- conjecture embedding has size m = 16
- the final layer is a sequence of linear, ReLU, linear, ReLU, and linear layers $(\mathbf{R}^{n+m} \to \mathbf{R}^{\frac{n}{2}} \to \mathbf{R}^2)$
- rare symbols are grouped together we can loosely speaking obtain a general constant, binary function, ...

Training:

• we use minibatches, where we group together examples that share the same conjecture and we cache all the representations obtained in one batch

2 Our Model

3 Speeding-up Evaluation with Caching

4 How to Incorporate the Learnt Advice?

5 Experiments

6 Conclusion

<ロト < 回 > < 臣 > < 臣 > 臣 の へ で 7/16

Terms in E are perfectly shared:

- at most one instance of every possible term in memory
- equality test in constant time

Caching of embeddings:

- thanks to the chosen architecture (i.e. the recursive nets), each logical term has a unique embedding
- hash table using term pointer as key gives us an efficient cache

<□ > < □ > < □ > < Ξ > < Ξ > Ξ の < ☉ 8/16

➡ Each term embedded only once!

- 4 How to Incorporate the Learnt Advice?

5 Experiments

6 Conclusion

Connecting the network with E

Clause selection in E – a recap:

- a variety of heuristics for ordering clauses called *clause weight functions*
- each to govern its own queue
- multiple queues combined in a round-robin fashion under some frequencies: e.g. 3 * *fifo* + 4 * *symbols*

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Connecting the network with E

Clause selection in E – a recap:

- a variety of heuristics for ordering clauses called *clause weight functions*
- each to govern its own queue
- multiple queues combined in a round-robin fashion under some frequencies: e.g. 3 * *fifo* + 4 * *symbols*

New clause weight function based on the NN:

- could use the predicted probability values (order by, desc)
- however, just yes / no works better!
 - ➡ Insider knowledge: fifo then breaks the ties!

Connecting the network with E

Clause selection in E – a recap:

- a variety of heuristics for ordering clauses called *clause weight functions*
- each to govern its own queue
- multiple queues combined in a round-robin fashion under some frequencies: e.g. 3 * *fifo* + 4 * *symbols*

New clause weight function based on the NN:

- could use the predicted probability values (order by, desc)
- however, just yes / no works better!
 Insider knowledge: *fifo* then breaks the ties!
- also, mix NN with the original heuristic for the best results (we mixed 50-50 in experiments)

→ without caching, NSRGA of $S \oplus M_{nn}$ drops from 7.1 to 3.6 percent of the speed of S

< □ > < □ > < □ > < Ξ > < Ξ > Ξ の Q · 15/16

Conclusion

Summary:

- recursive neural networks catching up on gradient boosted trees for clause selection in E
- evaluation speed improved via caching

Still open:

- What when symbols are not aligned?
- What is the best way of integrating the guidance and why?
